

## FBML

28-5-2010

<http://developers.facebook.com/docs/reference/fbml/>

## Tools

**fb:board**

Displays a discussion board with a unique identifier.

**fb:bookmark**

Renders a button that lets a user bookmark your application or Facebook Connect website so a link to your application appears on the user's profile.

**fb:chat-invite**

Enables your users to initiate Facebook Chat with their friends from within your applications.

**fb:comments**

Displays a set of comments for a unique identifier.

**fb:default**

For a group of fb: tags contained within an fb:switch tag, the fb:default tag renders any content inside itself if no other fb: tag inside the fb:switch tag renders code before it.

**fb:else**

Handles the else case inside any fb:if, fb:if-\* or fb:is-in-network tag, and with age and location restricting tags.

**fb:feed**

Renders an application-specific News Feed, which displays recent application stories about the logged in user's friends.

**fb:friend-selector**

Renders a predictive friend selector input for a given person.

**fb:google-analytics**

Inserts appropriate Google Analytics code into a canvas page.

**fb:if**

Only renders the content inside the tag if value tag is set to true.

**fb:if-multiple-actors**

Displays the enclosed content when more than one actor is involved in a Feed story.

**fb:mobile**

Renders the contained content only when viewed on the mobile website (<http://m.facebook.com>).

**fb:multi-friend-input**

Renders a multi-friend form entry field like the one used in the message composer.

**fb:quantcast**

Inserts appropriate Quantcast code into a canvas page.

**fb:random**

Randomly chooses an item inside the tags based on the weights provided.

**fb:random-option**

Contains code to be output when selected by the fb:random tag.

**fb:switch**

Evaluates every fb: tag inside and returns the first one that evaluates to anything other than an empty string.

**fb:typeahead-input**

Creates a type-ahead tool (as suggested) that will give you the results that you specify.

**fb:typeahead-option**

This tag specifies the values for a typeahead form input.

**fb:user-agent**

Displays the contents wrapped inside the tag to the specified user-agents.

## User/Groups

**fb:eventlink**

Prints the specified event name and formats it as a link to the event's page.

**fb:groupink**

Prints the specified group name and formats it as a link to the group's page.

**fb:if-can-see**

Displays the enclosed content if the logged in user can see the specified what attribute of the specified user.

**fb:if-can-see-photo**

Displays the enclosed content only if the logged in user can see the photo specified.

**fb:if-is-app-user**

Displays the enclosed content only if the specified user has accepted the terms of service of the application (that is, authorized your application).

**fb:if-is-friends-with-viewer**

Displays the enclosed content only if the specified user is friends with the logged in user.

**fb:if-is-group-member**

Displays the enclosed content only if the specified user is a member of the specified group.

**fb:if-is-user**

Only renders the content inside the tag if the viewer is one of the specified user(s).

**fb:if-is-verified**

Displays the enclosed content only if Facebook has verified the current user.

**fb:is-in-network**

Displays content inside the tag only if the user is in a given network.

**fb:name**

Renders the name of the user specified, optionally linked to his or her profile.

**fb:profile-pic**

Turns into an img tag for the specified user's or Facebook Page's profile picture.

**fb:pronoun**

Renders a pronoun for a specific user.

**fb:user**

Hides the content enclosed in this tag from any user who is blocked by the user whose uid is referenced in fb:user.

**fb:user-status**

Returns the status of the user specified by uid.

## Notifications and Requests

**fb:application-name**

Renders the application name.

**fb:multi-friend-selector**

There are actually two versions of this button - the full version and the condensed version.

**fb:multi-friend-selector (condensed)**

There are actually two versions of this button - the full version and the condensed version.

**fb:req-choice**

Specifies a button to be shown at the bottom of a request on the user's [requests page](#).

**fb:request-form**

Creates a form that sends requests to the selected users.

**fb:request-form-submit**

Creates a button that submits an fb:request-form.

## Platform Internationalization

**fb:date**

Renders a date.

**fb:fbml-attribute**

Contains the value of an attribute of an FBML tag.

**fb:intl**

Marks a string of English text as translatable into other languages.

**fb:intl-token**

Contains an attribute that replaces a token (variable) in the text of an fb:intl tag.

**fb:tag**

Renders an HTML tag.

**fb:tag-attribute**

Contains the value of an attribute of an HTML tag specified by fb:tag.

**fb:tag-body**

Contains the body (contents) of an HTML tag specified by fb:tag.

## Status Messages

**fb:error**

Renders a standard Facebook error message.

**fb:explanation**

Renders a standard Facebook explanation message.

**fb:message**

Renders the heading text for an error, explanation or success message.

**fb:success**

Renders a standard Facebook success message.

## Page Navigation

**fb:create-button**

Renders a Create button for adding user-generated content.

**fb:dashboard**

Renders a standard Facebook dashboard header.

**fb:header**

Renders a standard Facebook title header.

**fb:header-title**

Specifies the header title for a fb:mediaheader.

**fb:help**

Renders a help link.

**fb:mediaheader**

Renders a standard media header, rendered mainly for displaying content contributed by a particular user.

**fb:owner-action**

Specifies an action link to be displayed inside a fb:mediaheader when the viewer is the owner of the content

**fb:tab-item**

Renders a standard Facebook tab.

**fb:tabs**

Renders a group of standard Facebook navigation tabs.

## Wall

**fb:wall**

Emulates the look of a wall environment.

**fb:wallpost**

Renders a Wall-style post.

**fb:wallpost-action**

Displays a link at the bottom of a wallpost (even if it appears before other text within the fb:wallpost tag).

**fb:18-plus**

Restricts content to users who are age 18 or older.

**fb:21-plus**

Restricts content to users who are age 21 or older.

**fb:restricted-to**

Lets you tailor the enclosed content to display to specific ages, locations, or content types.

**fb:visible-to-app-users**

Displays the enclosed content only if the viewer has granted full permissions to the application.

**fb:visible-to-connection**

Use this tag to display the content inside the tag on a user's or a [Facebook Page's](#) profile only if the viewer is a friend of that user or is a fan of that Facebook Page.

**fb:visible-to-friends**

Use this tag to display the content inside the tag on a user's profile only if the viewer is a friend of that user.

**fb:visible-to-owner**

Creates content inside only if the viewer of the profile matches the profile owner.

## Profile-specific

**fb:action**

Renders a link, usually for navigational purposes.

**fb:add-section-button**

Renders an [Add to Profile](#) or [Add to Info](#) button (depending upon which section attribute you specify) on an application's canvas page.

**fb:if-section-not-added**

Renders the content wrapped within this tag on an application canvas page if the user hasn't added a condensed profile box or info section to her profile.

**fb:narrow**

Renders the content contained by the tag only if the profile box is in the narrow column of the profile.

**fb:publisher-link**

Renders an anchor tag around the internal content pointing to a profile with the application's Publisher preselected.

**fb:subitle**

Defines the subtitle for the profile box.

**fb:user-item**

Renders a single cell of a table, which contains a thumbnail and name for a particular user, similar to the Mutual Friends table on profile pages.

**fb:user-table**

Renders a table, each cell of which contains a thumbnail and name for a particular user, similar to the Mutual Friends table on profile pages.

**fb:wide**

The enclosed content appears only when profile box is in the wide column of the profile.

## Misc

**fb:fbml**

This tag serves two purposes.

**fb:fbmlversion**

Prints the version of FBML currently in scope.

**fb:js-string**

This tag renders a block of FBML into an FBML block variable instead of rendering it on the page.

**fb:page-admin-edit-header**

For apps that can be added to Facebook Pages, this adds a standardized edit header for canvas pages so that the Page owner can easily jump to their Page's app configuration.

**fb:redirect**

Redirects a user's browser to a new URL within the Facebook canvas.

**fb:ref**

Fetches and renders content (like FBML or JavaScript) from a given ref source onto your canvas pages.

**fb:share-button**

Renders a standard Share button in a canvas page for the specified URL or content.

**fb:share-button (XFBML)**

Renders a standard Facebook Share button in a Facebook Connect implementation or iFrame application.

**fb:time**

Renders the date and time in the user's time zone.

**fb:title**

Sets the page's <title> tag to its contents.

## Editor Display

**fb:editor**

Creates a form with two columns, just like the form on the edit-profile page.

**fb:editor-button**

Renders a button of type submit inside an fb:editor tag.

**fb:editor-buttonset**

A container for one or more fb:editor-button tags, which are rendered next to each other with some space between each button.

**fb:editor-cancel**

Renders a Cancel button inside an fb:editor tag.

**fb:editor-custom**

Allows you to put any content into an fb:editor block, as long as it is valid FBML.

**fb:editor-date**

Creates two drop down list boxes that let a user select a date.

**fb:editor-divider**

Renders a horizontal line separator in the column containing the form elements.

**fb:editor-month**

Creates a form selector element displaying the month.

**fb:editor-text**

Creates an <input> of type text.

**fb:editor-textarea**

Creates a <textarea> element.

**fb:editor-time**

Creates a series of form selector elements showing the time in hours and minutes, and an AM/PM indicator.

## Embedded Media

**fb:flv**

Renders a Flash-based FLV player that can stream arbitrary FLV (video/audio) files on the page.

**fb:iFrame**

Inserts an <iFrame> tag into an application canvas page; you cannot use the tag on the profile page (that is, application tabs and profile boxes).

**fb:mp3**

Renders a Flash-based audio player.

**fb:photo**

Renders a Facebook photo.

**fb:silverlight**

Renders a Microsoft Silverlight control.

**fb:swf**

Renders a Shockwave Flash (SWF) object.

## Dialog

**fb:dialog**

The fb:dialog tag displays a lightweight dialog box when a user clicks on some element.

**fb:dialog-button**

Renders a button for the fb:dialog popup.

**fb:dialog-content**

The fb:dialog-content tag is a child of fb:dialog and represents the content that gets displayed inside the popup dialog when it appears.

**fb:dialog-title**

fb:dialog-title is a child of fb:dialog and renders a title for what is displayed inside the popup dialog.

## Additional Permissions

**fb:prompt-permission**

Renders the content of the tag as a link that, when clicked, initiates a dialog requesting the specified extended permissions from the user.

## Social Widgets

**fb:comments (XFBML)**

Displays a Comments Box on a Facebook Connect site or in an iFrame application.

**fb:live-stream**

Use this tag to render a Live Stream Box social widget on your FBML canvas pages or Facebook Connect sites.

## Message Attachments

**fb:attachment-preview**

Renders a link in a message attachment that, when clicked, replaces that attachment with newly fetched content.

## Forms

**fb:captcha**

Renders a CAPTCHA on your canvas page inside of a form.

**fb:submit**

Creates a JavaScript submission mechanism for a form, which makes image or text links act as Submit buttons.
